Work Portfolio

Education

- Birla Institute of Technology, Mesra** 2023 – 2027
Bachelor of Technology in Computer Science and Engineering (CGPA: 8.42 / 10.0) Ranchi, India

Relevant Coursework: Data Structures & Algorithms (DSA), Operating Systems, Database Management Systems (DBMS), Systems Design, Artificial Intelligence and Machine Learning (AI&ML), Software Engineering, Object Oriented Programming (OOP).

Certifications & Achievements

- Top 10 at Monad Blitz Hackathon** Placed 8th out of 200+ participants by deploying an escrow protocol using **Sarvam AI**. [\[Profile\]](#)
- LeetCode Knight (Peak Rating: 1,893 | Top 8% globally)** [\[GitHub\]](#)
- OSS Contributor** 10+ PRs merged to **Prometheus Operator**, KubeVirt, Zulip, **Browser-use**. [\[Verify Certificate\]](#)
- OSS Maintainer** Biscuit IDE – Open-Source IDE ecosystem with **250+ GitHub stars**. [\[Verify Certificate\]](#)
- Google Cloud Certified AI Professional**. [\[Verify Certificate\]](#)
- Meta Certified Professional Backend Developer** Grade Achieved: **99%** [\[Verify Certificate\]](#)
- IBM Full Stack Developer Assessment** Scored **89.44%** on software engineering benchmark. [\[Verify Certificate\]](#)

Work Experience

- Full Stack Engineer Intern** Nov 2025 – Feb 2026
Morvion Remote, Zurich
 - Lowered database connection lockups by **35%** under high concurrency by implementing automated cache-eviction strategies.
 - Built a full-stack CRM MVP featuring real-time Kanban pipelines and automated multi-provider email synchronization.
 - Engineered B2C subscription and monetization workflows using Stripe API, custom webhooks, and credit system.
- AI Engineer Intern (Full Stack)** July 2025 – Sept 2025
Hooman Digital LLP Remote, India
 - Processed visual screen buffers under **50ms** by designing a native low-latency trading symbol tracking pipeline.
 - Boosted data streaming throughput by **40%** by re-architecting trace logs via asynchronous Server-Sent Events.
 - Decoupled the client ingestion layer using **RabbitMQ** message brokers and **Redis** memory stores to eliminate traffic spikes.
- Deep Learning Research Intern** May 2025 – July 2025
NIT Calicut Calicut, India
 - Improved biometric classification performance by **15%** by deploying and testing 5 CNN-Transformer hybrid models.
 - Reduced model training cycle time by over **25%** by designing optimized PyTorch pipelines with automated early stopping.
- Founding Software Engineer Intern** Oct 2024 – Jan 2025
OZi Remote, India
 - Architected and shipped an initial production quick-commerce API layer using **Node.js** and **MongoDB** within 5 weeks.
 - Sustained **12x traffic surges** while maintaining P95 latency **<35ms** via strict connection pooling and index tuning.

Projects

- Biscuit – Agentic IDE** [\[Live Project\]](#)
Skills: Python, LangChain, RAG [\[Source Code\]](#)
 - Automated planning, debugging, and coding, by building an **IDE with AI agents**, MCP, and human-in-the-loop workflow.
 - Enabled semantic code intelligence across **20+ languages**, using Tree-sitter parsers and Language Servers.
 - Optimized global search **latency under 100ms** for folders exceeding **1M+ lines**, using multi-threaded Ripgrep.
- Hiroshi OS – AI Gateway** [\[Live Project\]](#)
Skills: Rust, Tokio, SQLite, WebSockets, Docker [\[Source Code\]](#)
 - Re-architected OpenClaw AI Gateway in Rust, shrinking application footprint under **25MB**.
 - Built a threaded multiplexer to split instructions into parallel threads, optimizing CPU utilization.
 - Designed a non-blocking **JSON-RPC** bridge over WebSockets and stdio for headless CLI orchestration.
 - Enforced multi-tenant workspace isolation, reducing security clearance latency under **0.05ms**.
 - Cut LLM context token overhead by **90%** by implementing a custom diff, eliminating full-file rewrites during edits.
 - Unified **5+ chat protocols** (Slack, Teams, Matrix, Telegram, etc.) into a pluggable engine, keeping memory overhead under **2MB**.
- Hiro – Computer Automation Agent** [\[Live Project\]](#)
Skills: Rust, Tauri, Chromium, Tokio, Computer Vision, TypeScript, Ollama [\[Source Code\]](#)
 - Achieved a **5x memory reduction** by engineering a native desktop driver with **Tauri** and **Tokio**.
 - Cut VLM API token overhead by **75%** by designing an adaptive Tiering system for screenshots.
 - Boosted execution reliability by **40%** using a **headless Chrome** and computer vision.
 - Mapped model [0, 1000] bounding boxes to physical display resolutions by engineering high-DPI coordinate normalization.

Technical Skills

- Languages:** C++, Go, Python, Rust, TypeScript, SQL, Bash
- Systems:** Linux, Concurrency & Multithreading, IPC, LLVM, gRPC, Protobuf
- Infrastructure, Tools:** PostgreSQL, CockroachDB, Redis, Kafka, GraphQL, Docker, GCP, GitHub Actions, Git
- AI Engineering:** LangGraph, Model Context Protocol (MCP), RAG, Vector Search (pgvector, Pinecone), PyTorch, pandas
- Frameworks:** Tauri, Electron, React, Node.js, Django, FastAPI, Express
