Summary

Software Engineer experienced in cross-functional remote collaboration within global teams. A highly adaptable problem-solver skilled at systems engineering in Rust, Python, Go, and optimizing services for a large concurrent user base.

Education

- Birla Institute of Technology, Mesra** 2023 – 2027
Bachelor of Technology in Computer Science and Engineering (CGPA: 8.42 / 10.0) Ranchi, India

Relevant Coursework: Data Structures & Algorithms (DSA), Operating Systems, Unit Testing / Integration Testing, System Design, Artificial Intelligence and Machine Learning (AI&ML), Software Engineering, Object-Oriented Programming (OOP).

Honors & Achievements

- Top 10 Monad Blitz Hackathon (8th of 200+)
- OSS Maintainer of [Biscuit project](#) (**35,000+ Users, 250+ GitHub stars**)
- OSS Contributor (**400+ PRs merged**, 100+ PRs reviewed)
- LeetCode Contests Knight Badge (**Top 8% globally**)
- Google Cloud **Certified AI Professional** [Verify]
- Meta Backend Developer Certificate (Grade: 99%) [Verify]
- IBM Full-Stack Developer Assessment (**Grade: 89.44%**) [Verify]

Work Experience / Internships

- Full Stack Engineer Intern** Nov 2025 – Feb 2026
Morvion Remote, Zurich
 - Architected a marketplace with request-to-quote pipeline processing **100+ daily consumer leads** across 50+ enterprise venues
 - Introduced an LLM-based multi-provider email classifier into internal CRM backend handling over 200+ company email threads.
 - Engineered B2C subscription and monetization workflows using Stripe API, custom webhooks, and credit system.
- AI Engineer Intern (Full Stack)** July 2025 – Sept 2025
Hooman Digital LLP Remote, India
 - Designed a low-latency symbol tracking pipeline, tracking over **200+ tickers** accurately.
 - Replaced websocket streaming with asynchronous Server-Sent Events (SSE) for agent logs, cutting server overhead by 40%.
 - Built an AWS SQS and DynamoDB pipeline to handle traffic spikes, serving over **400+ MAUs**
- Deep Learning Research Intern** May 2025 – July 2025
NIT Calicut Calicut, India
 - Improved biometric classification accuracy by **25%** by building state-of-the-art CNN-Transformer fusion models.
 - Engineered 5+ EEG classifier fusion models handling spatial-temporal multi-channel tensors using PyTorch.
- Founding Software Engineer Intern** Oct 2024 – Jan 2025
OZi Remote, India
 - Built core MVP features that successfully scaled the platform to handle a catalog of 15,000+ curated items.
 - Engineered deep-linking and search APIs, directly accelerating the app’s growth **to 100K+ downloads**.

Projects / Open Source

- Biscuit – Agentic IDE** [Live Project]
Skills: Python, LangChain, RAG, MCP [Source Code]
 - Automated planning, debugging, and coding, by building an **IDE with AI agents**, MCP, and human-in-the-loop workflows.
 - Introduced semantic code intelligence for **20+ languages** using Tree-sitter and LSP, serving a base of **35,000+ users**.
 - Optimized global search **latency under 100ms** for folders exceeding **1M+ lines**, using multi-threaded Ripgrep.
- Hiroshi OS – AI Gateway** [Live Project]
Skills: Rust, Tokio, Tailscale, MCP, WebSockets, Docker [Source Code]
 - Re-architected OpenClaw AI Gateway in Rust, shrinking application **footprint under 25MB**.
 - Built a threaded multiplexer to split instructions into parallel threads, optimizing **CPU utilization by 40%**.
 - Cut LLM context **token overhead by 90%** by implementing a custom diff, eliminating full-file rewrites during edits.
 - Unified **5+ chat protocols** (Slack, Teams, Matrix, Telegram, etc.) into a pluggable engine, keeping memory overhead under **20MB**.
- Elo – Real-Time Competitive Platform** [Live Project]
Skills: TypeScript, Bun, React Native, Protocol Buffers, SQLite [Source Code]
 - Engineered a math e-sport platform using Bun, delivering round-trip latency under 40ms, serving 10+ concurrent users.
 - Implemented an anti-cheat engine tracking rapid inputs (less than 120ms) into honeypot sandbox to issue hardware bans.

Technical Skills

Programming Languages:	Python, Go, Rust, TypeScript, C++, SQL, Bash
Libraries / Frameworks:	Tauri, React Native, Electron, React, Node.js, Django, FastAPI, Express, gRPC, Protobuf, GraphQL, LangChain, Pydantic, PyTorch, pandas, Tokio, shadcn/ui
Tools / Platform:	AWS (SQS, EC2, S3, DynamoDB), WSL, Docker, GitHub Actions, Git, Tailscale, Kafka, Stripe, Jujutsu
Databases:	PostgreSQL, CockroachDB, Redis, SQLite, Vector Search (pgvector, Pinecone)
