Summary

Software Engineer experienced in building backend tools and real-time platforms. Work primarily in Python, Rust, and Go. Looking to join a core engineering team focused on shipping high-performance product features and scaling production systems.

Education

Birla Institute of Technology, Ranchi
Major: Computer Engineering

Degree: Bachelor's
2023 – 2027

Work Experience / Internships

- **Software Development Engineer Intern** July 2025 – Sept 2025
Hooman Digital LLP | [Live Production Deployment](#) Kolkata, India
 - Designed a low-latency symbol tracking pipeline using LLMs, tracking over **200+ financial tickers** accurately.
 - Replaced websocket streaming with asynchronous Server-Sent Events (SSE) for agent logs, cutting server **overhead by 40%**.
 - Built an AWS SQS and DynamoDB pipeline to handle traffic spikes, serving over **400+ MAUs**
- **Research Intern** May 2025 – July 2025
NIT Calicut Calicut, India
 - Improved biometric classification **accuracy by 25%** by building state-of-the-art CNN-Transformer fusion models.
 - Engineered 5+ EEG classifier fusion models handling spatial-temporal multi-channel tensors using PyTorch.
- **Software Development Engineer Intern** Oct 2024 – Jan 2025
OZi Technologies Private Limited | [Google Play Link](#) Gurgaon, India
 - Built core MVP features that successfully scaled the platform to handle a catalog of 15,000+ curated items.
 - Engineered deep-linking and search APIs, directly accelerating the app's growth to **100K+ downloads**.

Projects / Open Source

- **Biscuit – Agentic IDE** [biscuit.tomlin7.com](#)
Skills: Python, LangChain, RAG, MCP, React, Pydantic [github.com/tomlin7/biscuit](#)
 - Automated planning, debugging, and coding, by building an **IDE with AI agents**, MCP, and human-in-the-loop workflows.
 - Introduced semantic code intelligence for **20+ languages** using Tree-sitter and LSP, serving a base of **35,000+ users**.
 - Optimized global search **latency under 100ms** for folders exceeding **1M+ lines**, using multi-threaded Ripgrep.
- **Elo – Real-Time Competitive Platform** [elo.mintlify.site](#)
Skills: TypeScript, Bun, React Native, Protobuf, Docker, PostgreSQL [github.com/tomlin7/Elo](#)
 - Engineered a math e-sport platform using Bun, delivering round-trip **latency under 40ms**, serving 10+ concurrent users.
 - Implemented an anti-cheat engine tracking rapid inputs (less than 120ms) into honeypot sandbox to issue hardware bans.

Technical Skills

Programming Languages: Python, Go, Rust, TypeScript, C++, SQL, Bash
Libraries / Frameworks: Tauri, Electron, React, Node.js, Django, FastAPI, Express, React Native, gRPC, Protobuf, GraphQL, LangChain, Pydantic, PyTorch, pandas, Tokio, shadcn/ui
Tools / Platform: AWS (SQS, EC2, S3, DynamoDB), WSL, Docker, Git, Tailscale, Kafka, Stripe, Jujutsu
Databases: PostgreSQL, CockroachDB, Redis, SQLite, Vector Search (pgvector, Pinecone)

Achievements & Certifications

- Top 10 at Monad Blitz Bangalore V4 Hackathon (8th of 200+)
- OSS Maintainer of [Biscuit project](#) (**35,000+ Users, 250+ GitHub stars**)
- OSS Contributor (**400+ PRs merged**)
- Achieved LeetCode Knight Badge (**Top 8% globally**)
- Google Cloud **Certified AI Professional** Certificate [\[Verify\]](#)
- Meta Backend Developer Certificate (Grade: 99%) [\[Verify\]](#)
- IBM Full-Stack Developer Assessment (**Grade: 89.44%**) [\[Verify\]](#)
